

The MENISCUS goes free for students and residents

Join us and take advantage of our practical / theoretical program

Dear students, dear residents,

It is all the most important for us to offer you a **free registration** to the Meniscus congress as well as a **specific program** to serve your medical education.

Our primary aim is to bring added value for your physical presence at the congress so we are making a point on promoting heavily social interactions as well as practical, hands-on sessions. Below is a preview of what you may expect from this congress in addition to the main program:

Practical program

- Two workshops will be organized by the local team. It will include hands-on implants and clinical examination and rehabilitation. You can apply while registering to the main congress. Places will be allocated according to a "First come, first served" principle.
- Six industry workshops are available in the main program and accessible to all of you.
- We are closely working with industries to develop additional on-site simulation training activities.

Theoretical education

- An online platform including lectures from the congress will remain open and accessible after the congress. It will be regularly updated with new videos as well as the latest news about the meniscus.
- The online platform will include additional lectures and clinical cases aimed to serve your medical education so don't hesitate to interact with the community and share your experience.

For any updates, please visit regularly the congress website and don't forget to register!
